

# Public Printing for Mac OS X

## 1. Download installer packages

- Go to: <http://web.bryant.edu/~pharos>
- Indicate that you are a student, and download both the MAC Notify.dmg and MAC Popup.dmg files to your Macintosh computer.

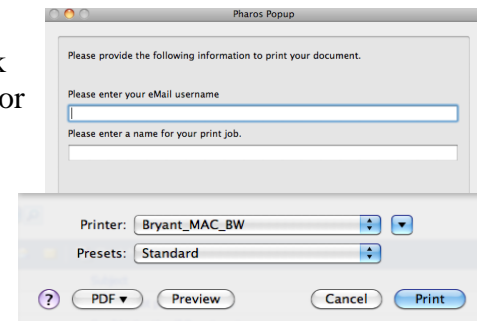

## 2. Install Pharos

- Locate the MAC Notify.dmg file in your Downloads folder. Double-click it, and you will see the Notify 8.1 icon appear on your desktop.
- Open the Notify 8.1 volume, and double-click the Notify.pkg file. This will launch the installer.
- Press “Continue” twice, then “Install.”
- Enter your laptop’s administrator password when prompted.
- Once the install has completed you will receive the success message and you can press “Close”.
- *Repeat these steps with the MAC Popup.dmg file.*

## 3. Print from any application

- From any application, choose to Print.
- Select either the “Bryant\_MAC\_BW” queue for black and white or the “Bryant\_MAC\_Color” queue for color printing.
- Enter your Bryant email username (do NOT include @bryant.edu) and a name for your print job (e.g. “MGMT homework”)
- Visit any of the printers on campus of the type you selected and swipe your Bryant ID card.
- Select your print job on the touchscreen and press Print

## Note for OS X 10.7 (LION)

- Those students running OS X 10.7 (Lion) on their Macintosh computer will see an additional popup message the first time they attempt to print to a Bryant University public printer.
- Simply choose to install the printer drive when prompted by pressing “Install.”
- Your submitted job will print correctly, and you will not see this notification in the future.
